DETAILED ACTION

This office action is responsive to a Preliminary AMENDMENT entered 8/15/2005.

Status of Claims

Claims 15-28 are new and pending. Claims 1-14 have been cancelled.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claim 15, drawn to a learning/thinking machine, classified in class 706, subclass 55.
- II. Claims 16-18, drawn to a learning/thinking method, classified in class 706, subclass 55.
- III. Claims 19-22, 23-28, drawn to an information gathering method and computer system, classified in class 706, subclass 45.

(I and II) vs III

The related inventions are distinct if the (1) the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect; (2) the inventions do not overlap in scope, i.e., are mutually exclusive; and (3) the inventions as claimed are not obvious variants. See MPEP § 806.05(j).

In the instant case, the inventions as claimed in (I and II) are drawn to a learning/thinking apparatus and method respectively, which has a separate utility than III, and are classified in different class/subclass respectively.

I vs II

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)).

In this case the process of learning/thinking, i.e. claimed invention II, can be practice by hand or mentally by human because the applicant does not recite "computer-implemented method" in the preamble, and the claim does not recite any hardware process that cannot be done mentally. The steps of information collecting, knowledge structuring, information generating, judging, learning, inference can all be done by human. This is how a human thinks and learns. Hence, II can be practice by hand and is distinct from I.

Why restriction is proper

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required

Art Unit: 2129

because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

Election requirement

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
